

Managed Application Services

Don't let unpatched applications put your business at risk. Protect your organization from costly security breaches, unexpected downtime, and compliance issues.

At Onevinn, we understand the importance of keeping software patched and up to date to ensure that systems remain secure and stable while reducing risks. Onevinn Managed Application Services provides continual management and governance for applications across your enterprise. We will help you maintain security, reduce vulnerability exposure and ensure application compliance, delivering ongoing support and automation for application management, removing the manual workload and audit risk from your IT team.

Automated Patching and Governance

Automated patching and governance for third-party and custom applications, fully integrated with Microsoft Intune. Unlock the full value of your patching investment through continuous optimization and expert application management across your enterprise.

Security and Compliance Benefits

Strengthen application security, reduce vulnerability exposure, and stay compliant with automated, continuously managed application governance. Eliminate manual workload and audit risk by controlling unwanted apps while keeping every application secure and compliant.

Continuous Monitoring and Adjustment

After integration and setup, patching is continuously monitored and regularly optimized to ensure consistently optimal results. Seamlessly adapt to new and changing applications while resolving issues fast, so your environment stays fully patched and performing at its best.

Reporting and compliance

Recurring reviews and regular governance meetings deliver clear compliance visibility while driving smarter application decisions and continuous improvement.

Managed Application Services

Automated Patching and Governance

Onevinn Managed Application Services provides automated patching and governance for third-party applications throughout your enterprise. This service is powered by a third-party patching tool and is seamlessly integrated with Microsoft Intune. Optimizing to get full effect of your third-party patching tool investment requires knowledge and continuous improvement. Additionally, Onevinn Managed Application Services supports management of custom applications not included in the third-party patching tool catalog.

Security and Compliance Benefits

By leveraging Onevinn Managed Application Services, your organization can maintain application security, reduce exposure to vulnerabilities, and ensure compliance with application requirements. To minimize risk and address licensing compatibility concerns, unwanted applications can be set for removal. Alternatively, these applications may be included in the patching process even if they are not desired, ensuring they remain secure and compliant. This service delivers ongoing support and automation for application management, thereby eliminating manual workloads and audit risks for your IT team.

Continuous Monitoring and Adjustment

Once service integration and initial setup are complete, it is essential to regularly monitor and adjust patching processes to achieve optimal results. New applications may be introduced to the third-party patching tool or become widely used among clients, requiring their addition to the update workflow. Any issues that may arise will be resolved to ensure that the software is always up to date with the latest patches.

Reporting and compliance

Reoccurring reviews to provide reports with insights about the software deployment update status and compliance levels. Regular meetings to ensure compliance, help identify areas for improvement, guidance and application decisions.
